

# Optimization of System Parameters with SCALEMASTER® HP

Optimising an existing system can be best achieved by targeting one of the three main design objectives (see diagram).

LECHLER will work with you to target the objectives at the beginning of an improvement project.

## Nozzle arrangements

LECHLER utilizes its own inhouse developed software to produce proposals quickly and economically.

**To receive a proposal from LECHLER, please complete the questionnaire at the back of this brochure and return it by telefax.**

Lechler designs and manufactures complete descaling systems, and is pleased to place this expertise at your service.
